

WILLOW

repository solutions for publications, research data and more

There's a lot to think about, but at Cottage Labs we can help you find and build the solution that's right for you.

Whether you are a small institution looking to get the essential features out-of-the-box, or a large, research-intensive organisation looking for customisations and integration with local systems, we can help you.

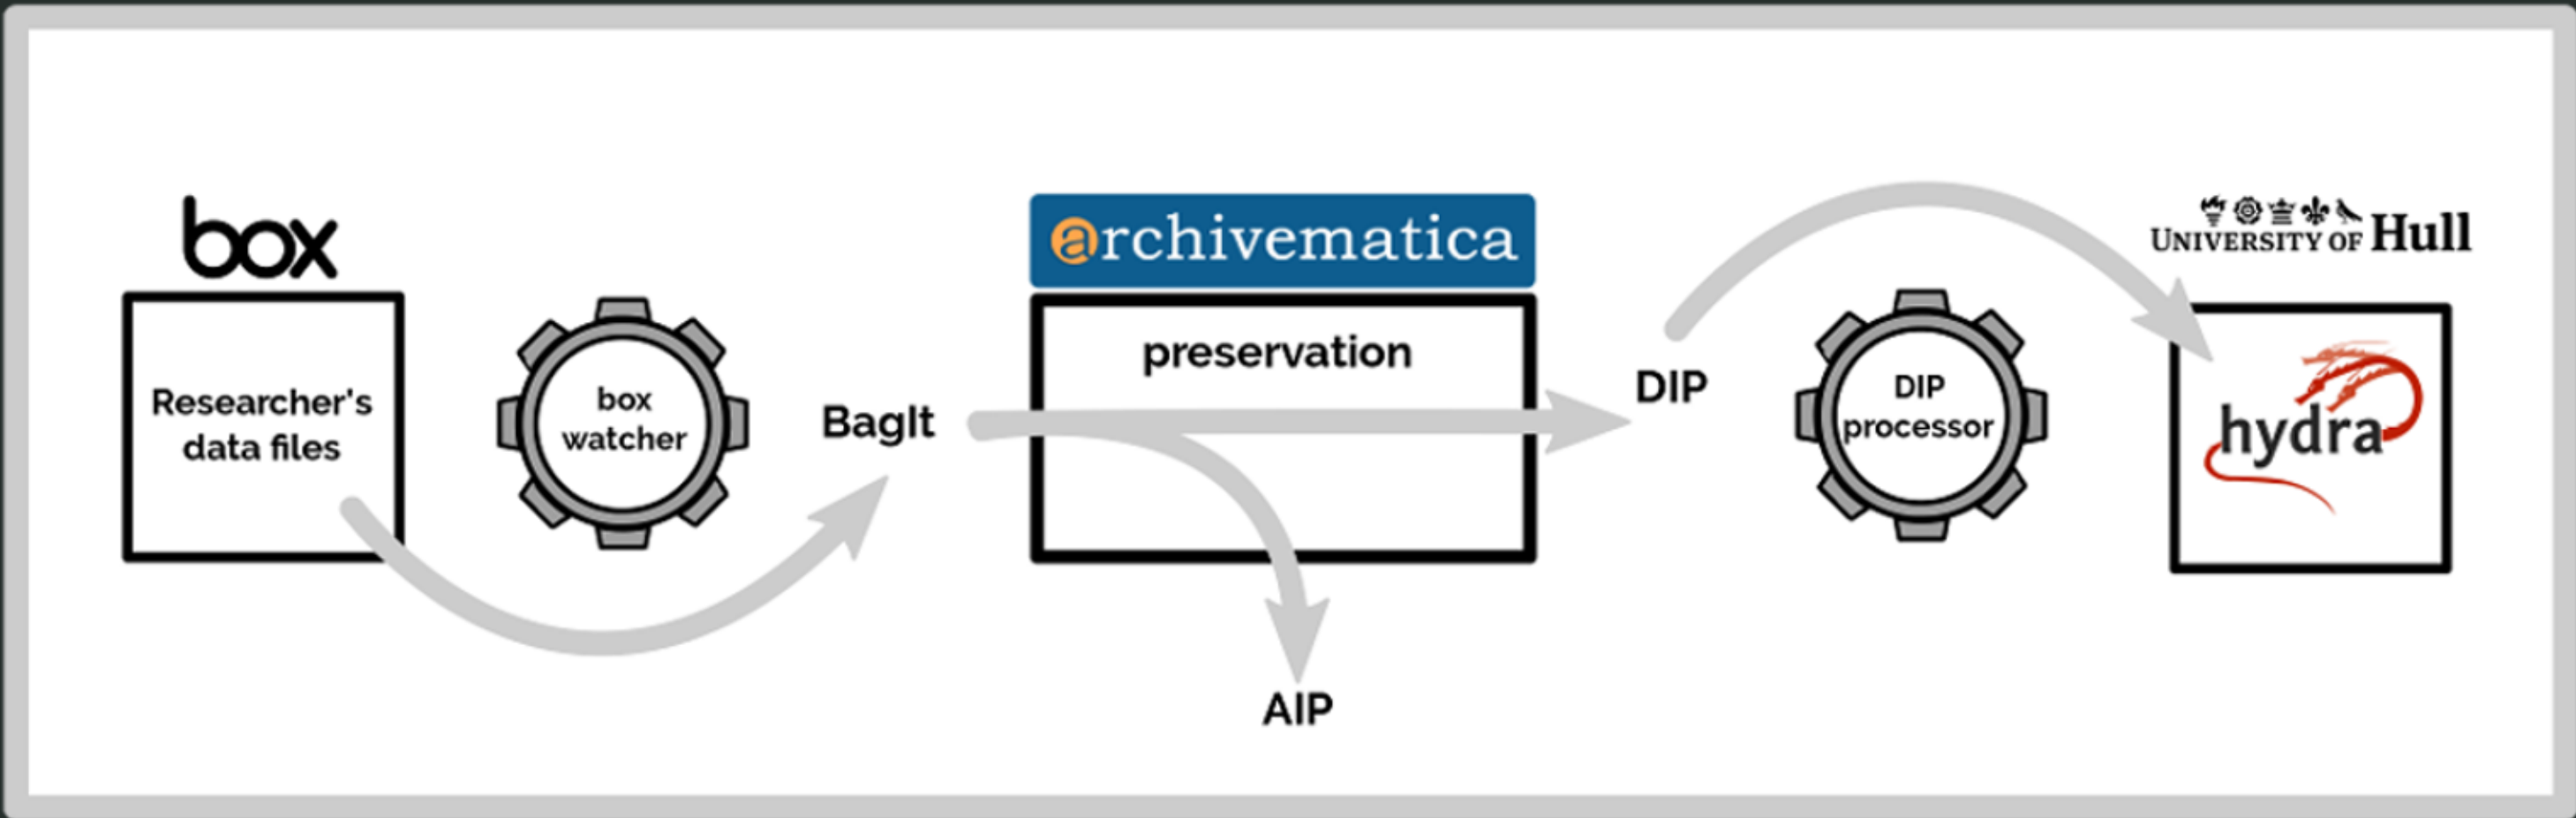

- Initial requirements capture and analysis
- Data modelling and system architecture
- Implementation and deployment
- Hosting options
- Bespoke development
- 3rd party system integration
- Maintenance, upgrades and migrations

Case Study: University of Hull

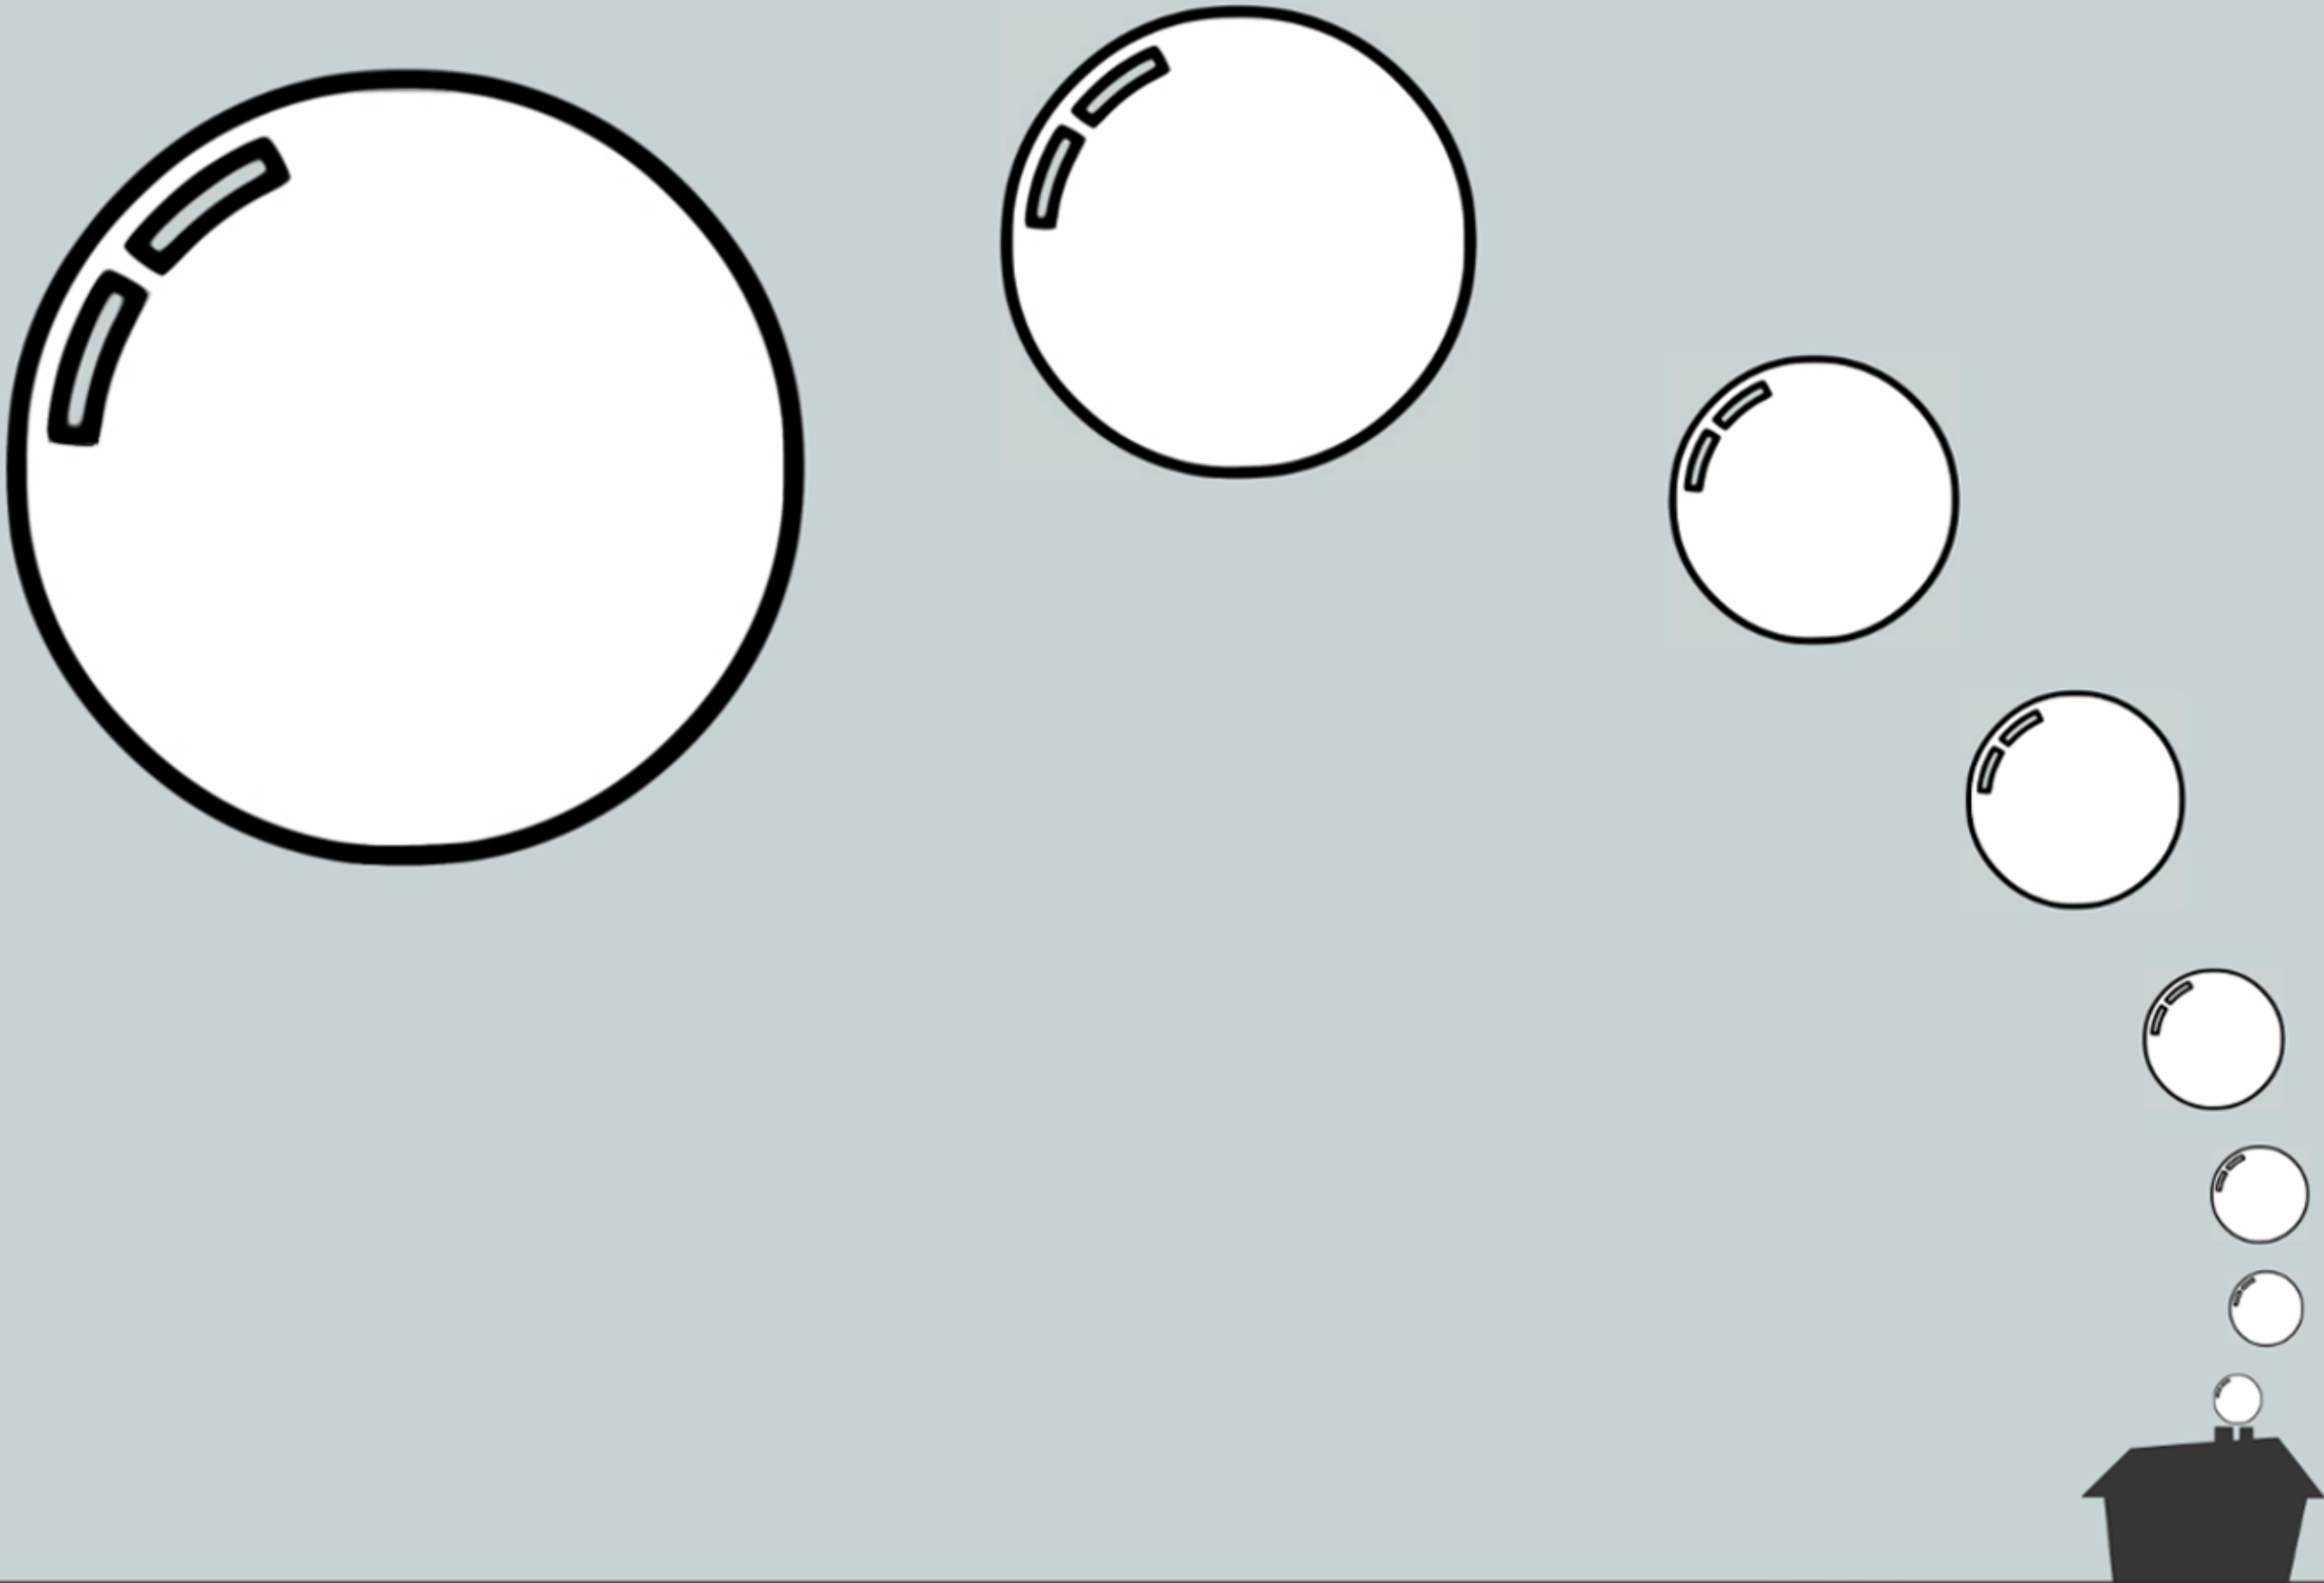

The University of Hull was carrying out some prototyping work to determine if they could create an easy research data deposit workflow that would be unobtrusive and intuitive within the researcher's environment

We worked with the library to implement a workflow which began with the researcher's **Box** account, automatically picking up work to be archived, passing it through the **Archivematica** preservation platform, and into the **Hydra** at Hull repository.

Finally we constructed a number of new components to support this workflow and deployed them to the Hull infrastructure, along with the Archivematica instance. This lays the groundwork for future research data management at the institution.
